

BaseAgent

```
classDiagram
    class BaseAgent {
    }
    class AgentAgent["Agent.Agent"] {
        + __init__(self, list [list[str]] creation_options)
    }
    BaseAgent <|-- AgentAgent
```

The diagram illustrates a class hierarchy. At the top is the 'BaseAgent' class, represented by a white box with a black border, divided into three horizontal sections. The top section contains the text 'BaseAgent', while the two sections below are empty. Below 'BaseAgent' is the 'Agent.Agent' class, represented by a grey box with a black border, also divided into three horizontal sections. The top section contains the text 'Agent.Agent', the middle section is empty, and the bottom section contains the method signature '+ __init__(self, list [list[str]] creation_options)'. A blue arrow with a hollow triangular head points from the top of the 'Agent.Agent' box to the bottom of the 'BaseAgent' box, indicating inheritance.

Agent.Agent

+ `__init__(self, list [list[str]] creation_options)`
