Chapter 1

Class Index

1.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

BasePlayer	Representa a entidade básica de um jogador na simulação	5
ServerComm	Gerencia a comunicação TCP de baixo nível com o servidor rcsserver3d	8

Chapter 2

File Index

2.1 File List

Here is a list of all files with brief descriptions:

src/run_full_team.cpp	21
src/run_player.cpp	22
src/Agent/BasePlayer.hpp	13
src/Booting/booting_templates.hpp	14
src/Communication/ServerComm.hpp	17

Chapter 3

Class Documentation

3.1 BasePlayer Class Reference

Representa a entidade básica de um jogador na simulação.

```
#include <BasePlayer.hpp>
```

Collaboration diagram for BasePlayer:

Public Member Functions

- [BasePlayer \(uint8_t unum\)](#)

Construtor: Inicializa o jogador e estabelece conexão com o servidor.

Public Attributes

- [uint8_t unum](#)

Número do uniforme do jogador.

Protected Attributes

- `ServerComm _scom`
Gerenciador de comunicação com o servidor rcssserver3d.

Static Protected Attributes

- `static std::vector< ServerComm * > _all_players_scom`
Lista estática compartilhada contendo ponteiros para os comunicadores de todos os jogadores.

3.1.1 Detailed Description

Representa a entidade básica de um jogador na simulação.

Definition at line 10 of file [BasePlayer.hpp](#).

3.1.2 Constructor & Destructor Documentation

3.1.2.1 BasePlayer()

```
BasePlayer::BasePlayer (
    uint8_t unum ) [inline]
```

Construtor: Inicializa o jogador e estabelece conexão com o servidor.

Realiza a reserva de memória no vetor estático, define o número do uniforme, executa o protocolo de handshake e registra o comunicador deste jogador na lista global.

Parameters

<code>unum</code>	Número do uniforme desejado para o agente (1 a 11).
-------------------	---

•

Definition at line 41 of file [BasePlayer.hpp](#).

3.1.3 Member Data Documentation

3.1.3.1 _all_players_scom

```
std::vector<ServerComm*> BasePlayer::_all_players_scom [inline], [static], [protected]
```

Lista estática compartilhada contendo ponteiros para os comunicadores de todos os jogadores.

Usada para passar a referência dos "outros jogadores" durante a inicialização e sincronização (Keep-Alive).

Definition at line 24 of file [BasePlayer.hpp](#).

3.1.3.2 _scom

`ServerComm BasePlayer::_scom [protected]`

Gerenciador de comunicação com o servidor rcssserver3d.

Instanciado automaticamente na criação do jogador. É responsável por enviar comandos e receber estados do jogo via TCP.

Definition at line 17 of file [BasePlayer.hpp](#).

3.1.3.3 unum

`uint8_t BasePlayer::unum`

Número do uniforme do jogador.

Tipo `uint8_t` utilizado para otimização de memória, já que o valor varia apenas de 1 a 11.

Definition at line 31 of file [BasePlayer.hpp](#).

The documentation for this class was generated from the following file:

- [src/Agent/BasePlayer.hpp](#)

3.2 ServerComm Class Reference

Gerencia a comunicação TCP de baixo nível com o servidor rcssserver3d.

`#include <ServerComm.hpp>`

Collaboration diagram for ServerComm:

ServerComm	
-	int <code>_sock_fd</code>
-	<code>std::vector< char ></code> <code>__read_buffer</code>
+	<code>ServerComm()</code>
+	<code>~ServerComm()</code>
+	<code>bool is_readable()</code>
+	<code>bool send_immediate</code> (<code>std::string_view msg</code>)
+	<code>std::string_view receive()</code>
+	<code>void receive_async</code> (<code>const std::vector< ServerComm * > &other_players</code>)
+	<code>void initialize_agent</code> (<code>int unum, std::vector< ServerComm * > &other_players</code>)
-	<code>bool __recv_all(void *buffer, size_t len)</code>

Public Member Functions

- [ServerComm \(\)](#)
Construtor: Inicializa socket, buffers e configurações de rede.
- [~ServerComm \(\)](#)
Destrutor: Garante o fechamento correto do socket.
- [bool is_readable \(\)](#)
Verifica se há dados prontos para leitura no Kernel.
- [bool send_immediate \(std::string_view msg\)](#)
Envia uma mensagem imediatamente utilizando Scatter/Gather I/O.
- [std::string_view receive \(\)](#)
Lê uma mensagem completa do servidor.
- [void receive_async \(const std::vector< ServerComm * > &other_players\)](#)
Aguarda resposta do servidor mantendo os outros agentes vivos (Keep-Alive).
- [void initialize_agent \(int unum, std::vector< ServerComm * > &other_players\)](#)
Realiza o handshake inicial do agente (Scene, Init e Sincronização).

Private Member Functions

- [bool __recv_all \(void *buffer, size_t len\)](#)
Tenta ler exatamente N bytes do socket.

Private Attributes

- [int __sock_fd](#)
Descriptor de arquivo do socket.
- [std::vector< char > __read_buffer](#)
Buffer persistente para leitura (evita reallocações frequentes)

3.2.1 Detailed Description

Gerencia a comunicação TCP de baixo nível com o servidor rcssserver3d.

Implementa estratégias de buffering, leitura não-bloqueante segura (polling) e envio otimizado via writev.

Definition at line 30 of file [ServerComm.hpp](#).

3.2.2 Constructor & Destructor Documentation

3.2.2.1 ServerComm()

```
ServerComm::ServerComm ( ) [inline]
```

Construtor: Inicializa socket, buffers e configurações de rede.

Configura TCP_NODELAY para baixa latência e SO_RCVTIMEO para evitar deadlocks.

Definition at line 82 of file [ServerComm.hpp](#).

3.2.2.2 ~ServerComm()

```
ServerComm::~ServerComm ( ) [inline]
```

Destrutor: Garante o fechamento correto do socket.

Definition at line 146 of file [ServerComm.hpp](#).

3.2.3 Member Function Documentation

3.2.3.1 __recv_all()

```
bool ServerComm::__recv_all (
    void * buffer,
    size_t len ) [inline], [private]
```

Tenta ler exatamente N bytes do socket.

Parameters

<i>buffer</i>	Ponteiro para o destino dos dados.
<i>len</i>	Quantidade de bytes a serem lidos.

Returns

True se leu todos os bytes com sucesso.

False se houve erro, timeout ou fechamento da conexão (EOF).

Definition at line 46 of file [ServerComm.hpp](#).

3.2.3.2 initialize_agent()

```
void ServerComm::initialize_agent (
    int unum,
    std::vector< ServerComm * > & other_players ) [inline]
```

Realiza o handshake inicial do agente (Scene, Init e Sincronização).

Parameters

<i>unum</i>	Número do uniforme do jogador.
<i>other_players</i>	Referência para lista de outros jogadores para sincronização.

Definition at line 325 of file [ServerComm.hpp](#).

3.2.3.3 is_readable()

```
bool ServerComm::is_readable ( ) [inline]
```

Verifica se há dados prontos para leitura no Kernel.

Utiliza select com timeout 0 (polling) para não bloquear a thread.

Returns

True se houver bytes para ler, False caso contrário.

Definition at line 155 of file [ServerComm.hpp](#).

3.2.3.4 receive()

```
std::string_view ServerComm::receive ( ) [inline]
```

Lê uma mensagem completa do servidor.

Implementa estratégia de "Drenagem": Lê todas as mensagens disponíveis e retorna apenas a mais recente para evitar lag acumulado.

Returns

`std::string_view` apontando para o buffer interno contendo a mensagem. Vazio se erro/timeout.

Definition at line 242 of file [ServerComm.hpp](#).

3.2.3.5 receive_async()

```
void ServerComm::receive_async (
    const std::vector< ServerComm * > & other_players ) [inline]
```

Aguarda resposta do servidor mantendo os outros agentes vivos (Keep-Alive).

Realiza polling neste socket. Se não houver dados, envia (syn) para os parceiros e drena a leitura deles para evitar buffer overflow.

Parameters

<code>other_players</code>	Lista de ponteiros para os comunicadores dos outros jogadores.
----------------------------	--

Definition at line 289 of file [ServerComm.hpp](#).

3.2.3.6 send_immediate()

```
bool ServerComm::send_immediate (
    std::string_view msg ) [inline]
```

Envia uma mensagem imediatamente utilizando Scatter/Gather I/O.

Constrói o cabeçalho de 4 bytes e envia junto com o corpo em uma única syscall (ou loop de syscalls), garantindo integridade mesmo em caso de escritas parciais.

Parameters

<i>msg</i>	A mensagem a ser enviada (string_view evita cópias).
------------	--

Returns

True se enviado com sucesso, False em caso de erro fatal.

Definition at line 180 of file [ServerComm.hpp](#).

3.2.4 Member Data Documentation

3.2.4.1 __read_buffer

```
std::vector<char> ServerComm::__read_buffer [private]
```

Buffer persistente para leitura (evita reallocações frequentes)

Definition at line 35 of file [ServerComm.hpp](#).

3.2.4.2 __sock_fd

```
int ServerComm::__sock_fd [private]
```

Descriptor de arquivo do socket.

Definition at line 33 of file [ServerComm.hpp](#).
